

Introducing GridTalk

...coordinating grid reporting across Europe...

**5th e-Infrastructure Concertation Meeting
Barcelona, June 6th 2008**

Cristy Burne
CERN/QMUL

GridTalk: who we are?

Who? A collaboration from CERN, Queen Mary University of London and designers “APO”, uniting and improving on the successes of:

- GridCafé
- *International Science Grid This Week (iSGTW)*
- GridCasts
- GridGuide (working with the Real Time Monitor)

...And who else? We plan to work with policy-related projects including BELIEF, GLOBAL, e-IRG, EGI_DP and OGF-Europe, as well as grid projects including EGEE and regional grid projects.

GridTalk: what we do

What? We will bring the success stories of Europe's e-Infrastructure to a wider audience.

How? With your help, we will coordinate the dissemination outputs of European grid computing efforts.

Why? To ensure that the results and influence of grid computing are reported and understood by policy makers, scientists and the general public.

Get in touch... We want to work with your project to create, exchange and showcase grid dissemination materials, including the results and outcomes of policy-related advances.
