The Finnish IT Center for Science (Coordinator)

NCF

The Netherlands National Computing Facilities foundation

ETL

Emergence Tech, Limited

GRNET

The Greek Research and Education Network

AUEB-RC

The Athens University of Economics and Business – Research Center

Genias Benelux

PSNC

Poznan Supercomputing and Networking Center

Finland

The Netherlands

United Kingdom

Greece

Greece

The Netherlands

Poland

The **e-Infrastructures Reflection Group** (e-IRG) is an **inter-governmental policy organisation** consisting of 30 member states. The e-IRG is instrumental in developing the national and Pan-European policies governing the use of the research e-Infrastructure.

The e-IRGSP2 project provides a comprehensive support framework for the work of the e-IRG. It supports the e-IRG delegates through:

- ▶ organisation of workshops,
- ▶ preparation of white papers, recommendations and roadmaps,
- ▶ collection and maintenance of an e-Infrastructure Knowledge Base,
- ▶ liaison with external stakeholders.

The 3-year FP7 e-IRGSP2 project started 1-1-2008 and builds on the previous support action (e-IRGSP).

Standardisation is a strong enabler for sustainable long-time use of e-Infrastructures. The e-IRG can leverage standardisation related efforts.

The project will support the liaison activities of the e-IRG with existing European standards organisations (OGF, ETSI, ...).
