

BELIEF-II, Bringing Europe's eElectronic Infrastructures to Expanding Frontiers Phase II, is a two-year European Commission co-funded FP7 project, which aims to support the goals of e-Infrastructure projects to maximise synergies in specific application areas between research, scientific and industrial communities.

BELIEF-II has the strategic objective to efficiently coordinate the communication of results, networking and knowledge between EU e-Infrastructure projects and their users to promote worldwide development and exploitation.

Thanks to its networking opportunities, which include the organisation of two e-Concertation meetings, two brainstorming events in Europe and three international symposia, held in India, Brazil and South Africa, BELIEF-II will build upon the first phase of the project to further strengthen the awareness and impact of e-Infrastructures on the emerging economies.

The BELIEF Digital Library (DL), which currently gathers over 13,500 e-Infrastructures documents, is a useful tool used by several EU projects for their documentation and dissemination activities. The DL ensures audiences have a one-stop-shop for researching a full range of multimedia information on e-Infrastructure projects. Enhancements of the DL will integrate a powerful Repository Service to supply access to stored material via standard protocols and ensure interoperability with different relevant repository infrastructures.

Together with external dissemination tools like the 'Zero-In' eMagazine, a high-impact e-Infrastructure publication reporting on key themes and pressing issues from a truly global perspective, the BELIEF-II DVD on e-Infrastructures, the e-Infrastructure Guide, the portal and the DL will form a key dissemination tool not only for projects' knowledge and content management but also for researchers and public wanting to search easily the most relevant activities and results of e-Infrastructures initiatives.

EGEE and BELIEF cooperate in several dissemination initiatives: EGEE is an active member of the Review Panel of the e-Infrastructure News Magazine (Zero-In) edited by BELIEF and will contribute to the script and filming of the BELIEF DVD on e-Infrastructures as well as the e-Infrastructure Guide. Moreover BELIEF - through its Portal and Digital Library - will offer to EGEE an additional medium for its dissemination activities.
